

Assessment task 2: Privacy preserving project

Maximum Marks: 50 marks of overall

Learning Objectives: This assessment task addresses the following subject learning objectives (SLOs): 1, 2 and 3.

This assessment task contributes to the development of the following Course Intended Learning Outcomes (CILOs): D.1

Team: individual

Introduction:

You have already got an initial idea of privacy attacks in the first assignment, and discussed on some possible defense solutions. Now you may like to Implement and/or comparing a set of existing privacy/security algorithms on a specific problem domain to defeat the attack in the first assignment. For example, you can apply differential privacy, k-anonymity or other perturbation methods to counter the attack.

When you describe your defense solution, please use experimental figures to show the results of the defense. For example, if you add noise to an image, please show the original image, and the noisy data you have generated. At least one attack and one defense method should be listed in the assignment.

Word limit: This is an individual assessment task. Students are required to submit a report of approximately 2000-2500 words along with exhibits to support findings.

Due: Friday, 11:59 pm, 23/10/2026

Rubric:

Criteria	Developing	Good	Very Good	Excellent
Introduction (5%)	Not clear introduction to the report and data breach at all.	Clear introduction to the report but not clear introduction to data breach.	Clear introduction to the report and clear introduction to data breach.	Very clear introduction to the report and clear introduction to data breach.
Case Introduction (10%)	Not clear introduction to case at all.	Clear introduction to the case but not clear introduction to breach method.	Clear introduction to the case and clear introduction to breach method, what kind of information has been stolen or damaged.	Very clear introduction to the case and clear introduction to breach method, what kind of information has been stolen or damaged.
Reasonable solution (60%)	Not a reasonable solution at all.	A reasonable solution but not detailed.	A reasonable and detailed solution. Adding figures, shows the results	More than one reasonable and detailed solutions. With figures plots and results.

Reflection (20%)	Not clear and deep reflection on what you learn from the case.	Clear but not deep reflection on what you learn from the case.	Clear and deep reflection on what you learn from the case.	Very clear and deep reflection on what you learn from the case.
Conclusion (5%)	Not clear conclusion for the report and the case at all.	Clear conclusion for the report but not clear conclusion for the case.	Clear conclusion for the report and the case.	Very clear conclusion for the report and the case.
